The 27th of August marked an historical event for G&G Mining Fabrication with our official presentation to our valued past, present and future clients attending a special function to celebrate our collaboration with our newest partner SSAB. A greater insight into the exciting possibilities that will be provided to our customers was put forward by G&G Mining Fabrication CEO, Richard Ladny and also by Director of Wear Services APAC a division of SSAB, Claes Lowgren.

Master of Ceremonies, Ron Gibson, started the evening off with a brief explanation of the services that both companies provide and how this union will strengthen G&G Mining Fabrication and SSAB's place in the Australian Mining Industry.

On display were examples of the products that are available from SSAB's wear plate division including a wealth of information aimed towards future projects. Also on display were a few of G&G Mining Fabrication's previous projects including an EX5500 Boom, EX3600 Bucket and a RH170 Bucket, great interest was shown in these products by all.

An exciting example of new technology for the mining and civil engineering industry was presented in the form of SSAB's 3D scanner which makes it possible to measure a bucket in around 2 minutes and to an accuracy of 1.2mm. The scanner produces a 3D image which can be saved and implemented to achieve a faster and easier approach to designing new products.

All in all an informative and fun night was had by all and we at G&G Mining Fabrication would like to extend our thanks to SSAB and all that attended this special evening and look forward to working with SSAB in developing mining products for the future, that will benefit our customers in efficiency and cost savings.
